

Israel

A light Unto Nations. A world Leader in...

Computer and Internet Technologies

When you use your computer, odds are you are using a technology developed in Israel.

Intel's Mobility Group, for example, designs and implements technologies used in notebook computers, phones, and many other devices. Intel develops several other technologies in Israel as well, including mobile communication technologies, Wi-Fi, high speed electronics on circuit boards, communication buses and topologies.

Much of Intel's development in Israel is centered around the software, including tools for innovative Wireless LAN devices, research in the design, development, testing and utilization of information processing hardware and/or electrical components, mechanisms, materials, and/or circuitry, processes, packaging, and cabinetry for central processing units (CPU's) and/or peripheral equipment.

In fact, much of the entertainment software and personal communication software people use daily comes from Israel, including voice mail in phone systems, Skype Internet phone calls, You've Got Pictures on AOL, Kazaa, ICQ, Metacafe and many more. So, the next time you use your computer, you now know that you are using technologies developed in Israel. (Company and product names above are all registered trademarks of the companies.)
