A light Unto Nations. A world Leader in...

Space Traffic Management

Most people think of traffic as the cars and congestion on our nations roads. In Israel, Traffic management is more than just the flow of cars, it's the flow of satellites in space.

Keeping satellites from crashing together is not only a good idea, it is an necessity. We rely on satellites for a wide variety of communications, including long distance and mapping. Each satellite can cost millions of billions of dollars, so keeping them from crashing is a major concern.

Israel is at the forefront of the technology of keeping satellites in proper orbits and tracking them, preventing accidents. There may not be an auto-club in space, but there is Israel.
